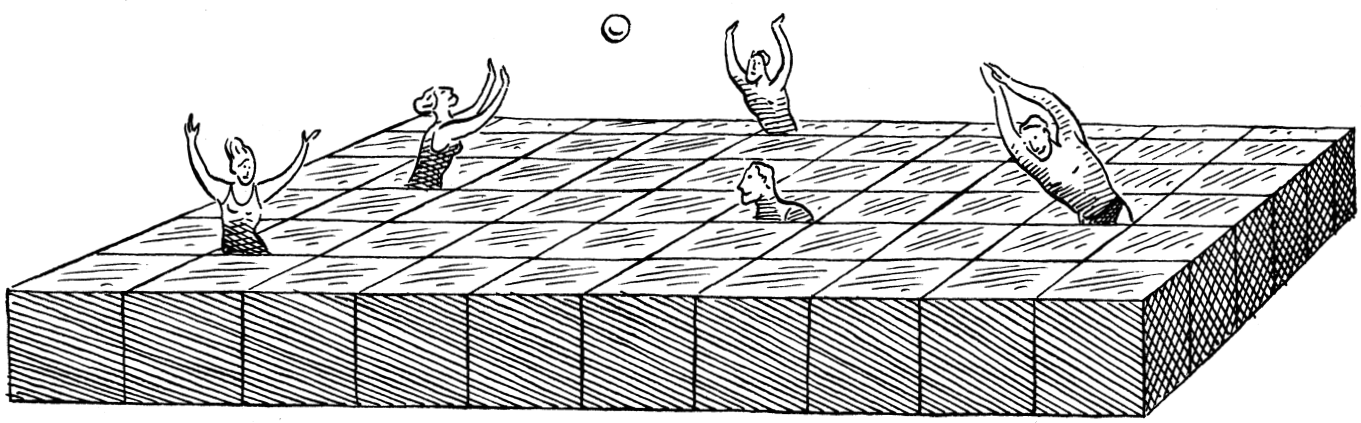
WATER USE ACTIVITY THREE

In Waitakere City, on average, every person uses an of 60 cubic metres of water each year.
(Of course, 60m3 is an average figure which we get by adding up all the water used in houses, and dividing it by the number of people ~ some people will use more water than this each year, and some will use less.)

If 60 cubic metres of water was made into a swimming pool, this is what it might look like.

60 cubic metres is a lot of water!



How could one person use 60 cubic metres of water in a year?

1. Make a list of all the ways we use water at home.

Bathroom	Toilet	Laundry	Kitchen	Outdoors

. Now arrange this list so that the highest water use is at the top, and the lowest is at the bottom.
Bathroom Toilet Laundry Kitchen Outdoors
