

APPENDIX I

**Auckland Regional Transport Authority:
Passenger Transport Network Plan 2006 - 2016
Figure 1.2**

Developing a Quality Transit Network

To meet the future need for cross-town travel, and travel to Auckland's CBD from areas not on the RTN, ARTA will develop a Quality Transit Network (QTN) that provides fast, high frequency and high quality passenger transport services between key centres. This QTN will mainly be based on major bus corridors with extensive bus priority measures, modern bus shelters, information and branded services.

Developing an Integrated Network

Auckland's future passenger transport network will be integrated, with train, bus and ferry services interconnected at passenger transport interchanges.

The introduction of an integrated ticketing system and simplified fare structure (applying across all bus and train services) will make passenger transport much easier to use and allow passengers to travel around the network on one ticket. Real-time information, that tells passengers when their next bus, ferry or train is coming, will be available at all major stops.
