

The following prices for rainwater tanks were sourced as part of a study for Beacon Pathway. The list is intended to give an idea of costs and types of rainwater tanks but it is not comprehensive and other local suppliers can be sourced through the Yellow Pages or internet. The prices and descriptions are as given in August 2008.

Timbertanks International Ltd	77B Morrin Road St Johns PO Box 18 239 Auckland 1006 New Zealand Ph: 09 574 6572 ttel@timbertanks.co.nz	Timber	9,000 litres Wall height: 2 metres Width 2.4 metres	\$4,050 inc gst and installation	The wood used is plantation-grown and therefore a renewable resource, while the energy consumption from raw material to operational Timbertank is minimal when compared to that of both concrete and steel. In short, we tie up more carbon than we actually generate, resulting in a negative-low carbon footprint.
			10,000 litres Wall height: 2 metres Width 2.8 metres	\$4,300 incl gst and installation	The barrel, 2/3rds the value of the tank will last 80 to 100 years because the timber has been treated. The cables may need replacement after 40 years if they are constantly wet and may need replacement, a quick and easy job. Some of the roof shingles (sheathing) may need attention, we are asking a lot of the timber being exposed to the direct sunlight. The new liner materials now used are expected to last 80 to 100 years but to replace a liner takes only an hour or two.
			20,000 litres Wall height: 2 metres Width: 3.5 metres	\$5,600 incl gst and installation	All timber used in a Timbertank is treated to ground contact standards to ensure long life. The New Zealand Forest Research Institute predicts a life in excess of eighty years for this grade of treated timber. Timbertanks are now recycling redundant tanks that are 30 years old, no sign of rot in the barrel staves.
			25,000 litres Wall height: 2.7 metres Width: 3.5 metres	\$7,200 incl gst and installation	The timber treatment (preservative) in the stave timber cannot contaminate the water as it is not in direct contact with the barrel timbers. The double liner system ensures there is no direct contact. The roof timbers are treated ACQ, this is not toxic to humans. The treatment is "fixed" into the timber and does not leach out. A lined roof is available if required.
			35,000 litres Wall height: 2 metres Width: 4.8 metres	\$7,400 incl gst and installation	Timbertanks uses only potable grade liner fabrics for all its water storage tanks.
			45,000 litres Wall height: 2.7 metres Width: 4.8 metres	\$9,400 incl gst and installation	
			70,000 litres Wall height: 2.7 metres Width: 6 metres	\$11,600 incl gst and installation
